Swarthmore IPLS Curriculum

IPLS Mechanics

Kinematics and Dynamics: ***random vs. coherent motion, biomechanical stability***

Energy: ***chemical energy***

Fluids: ***cardiology and flight***

Thermo: ***heat conduction and free energy***

IPLS E&M

Electricity/circuits: ***cell membrane, nerve signaling***

Magnetism and induction: ***magnetic sensing, NMR***

Optics: ***animal vision and microscopy***

Waves: ***echolocation***

Data Streams to Investigate Source of IPLS Gains

“Physics Affinity”

Example Item

Interest
(8 items)

“When I’m working on something in physics that I think is interesting, I continue working even when it takes a lot of time.”

items adapted from *Four-Phase Interest Development in Engineering Survey, FIDES 2.0*

Self-Efficacy
(8 items)

“I do not worry about my ability to solve physics problems.”

items adapted *Physics Self-Efficacy Survey, PSES*

Physics Relevance
to Bio (4 items)

“Physics is relevant for understanding biological processes.”

items adapted from the *MBEX Interdisciplinary Cluster items*

Physics Affinity

Project Question:

How do students' Physics Affinity scores develop in response to different instructional environments?

Characterizing Instructional Environments

“Yellow U”

- Large public research university
- Very experienced instructor
- Relatively little LS connection
- Carefully crafted learning progression

“Blue U”

- Large R1 university
- Two instructors, both new to institution
- Instr. 1: almost no LS integration
- Instr. 2: many more LS connections

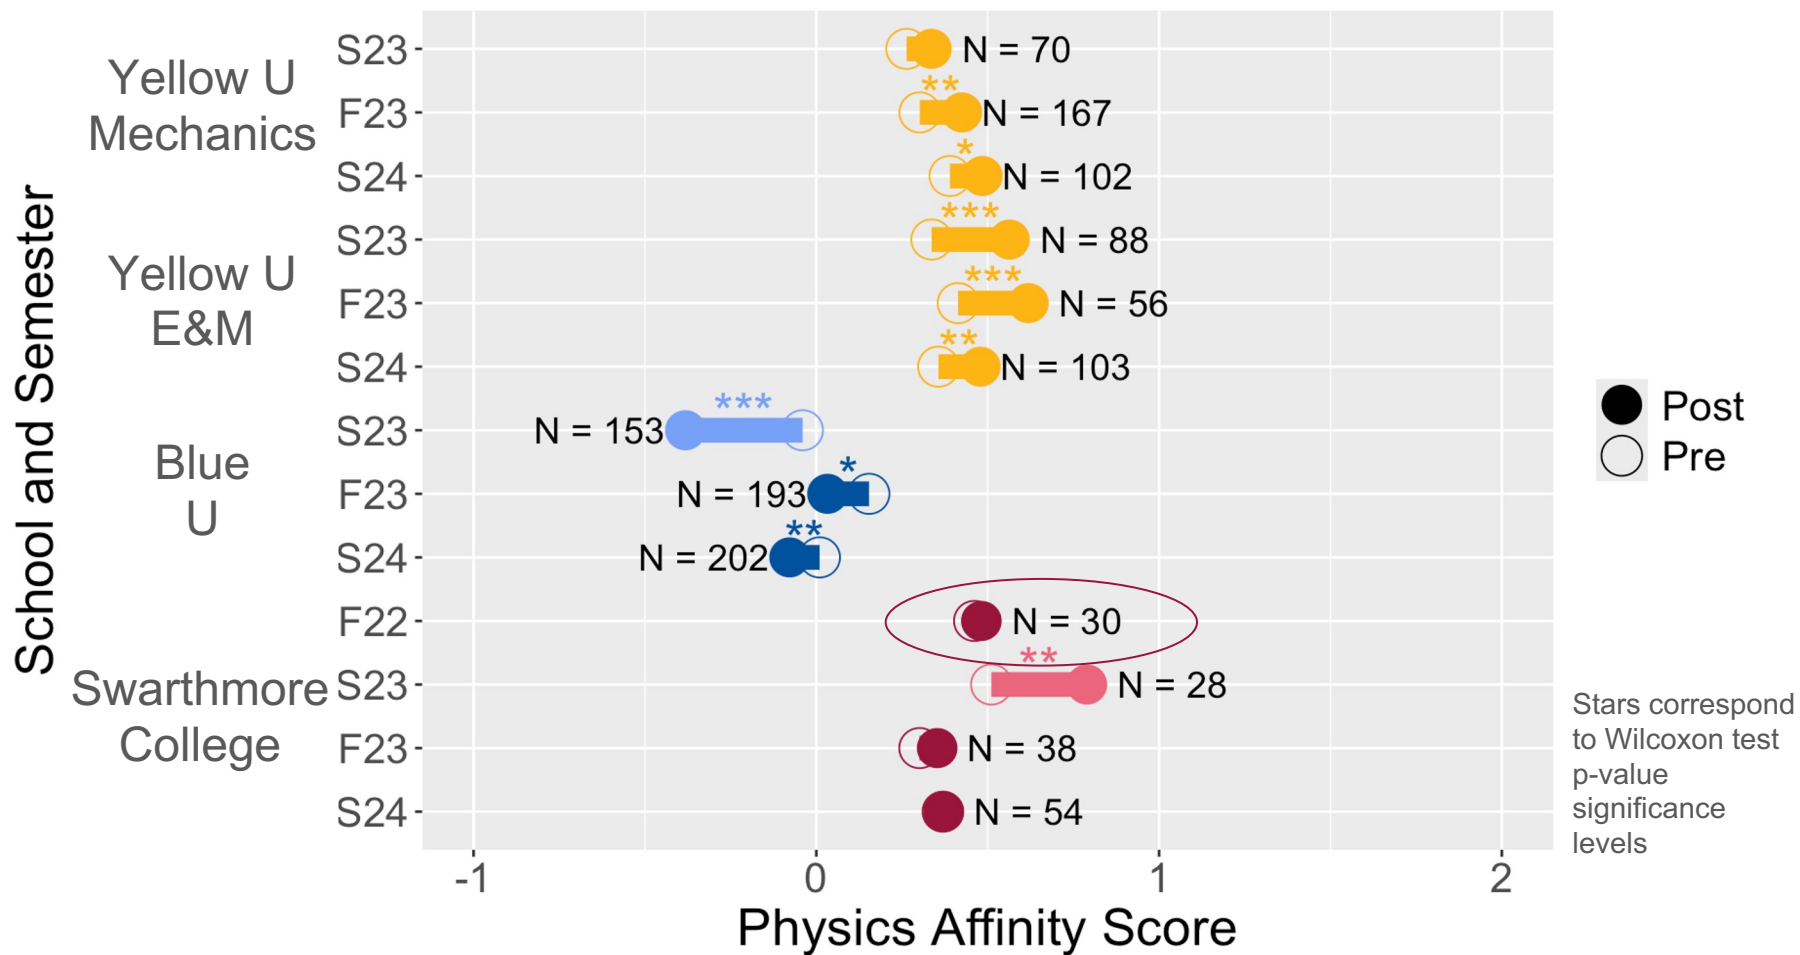

Swarthmore College

- Small liberal arts college
- Instr. 1: prioritized comfortable class environment, modest LS connections
- Instr. 2: prioritized LS connections, gave more challenging assessments

Pre to Post Mean Physics Affinity

Pre to Post Mean Physics Affinity

Change in Affinity

Swarthmore F22: PA Change vs Pre

$\mu_{\Delta PA} = 0.02, ns$

N = 30

Change in Affinity: Initial Affinity Levels

Swarthmore F22: PA Change vs Pre

$N_L = 6, N_M = 17, N_H = 7$

Low Pre-PA

$\mu_{\Delta PA} = 0.43$

*

Medium Pre-PA

$\mu_{\Delta PA} = -0.11$

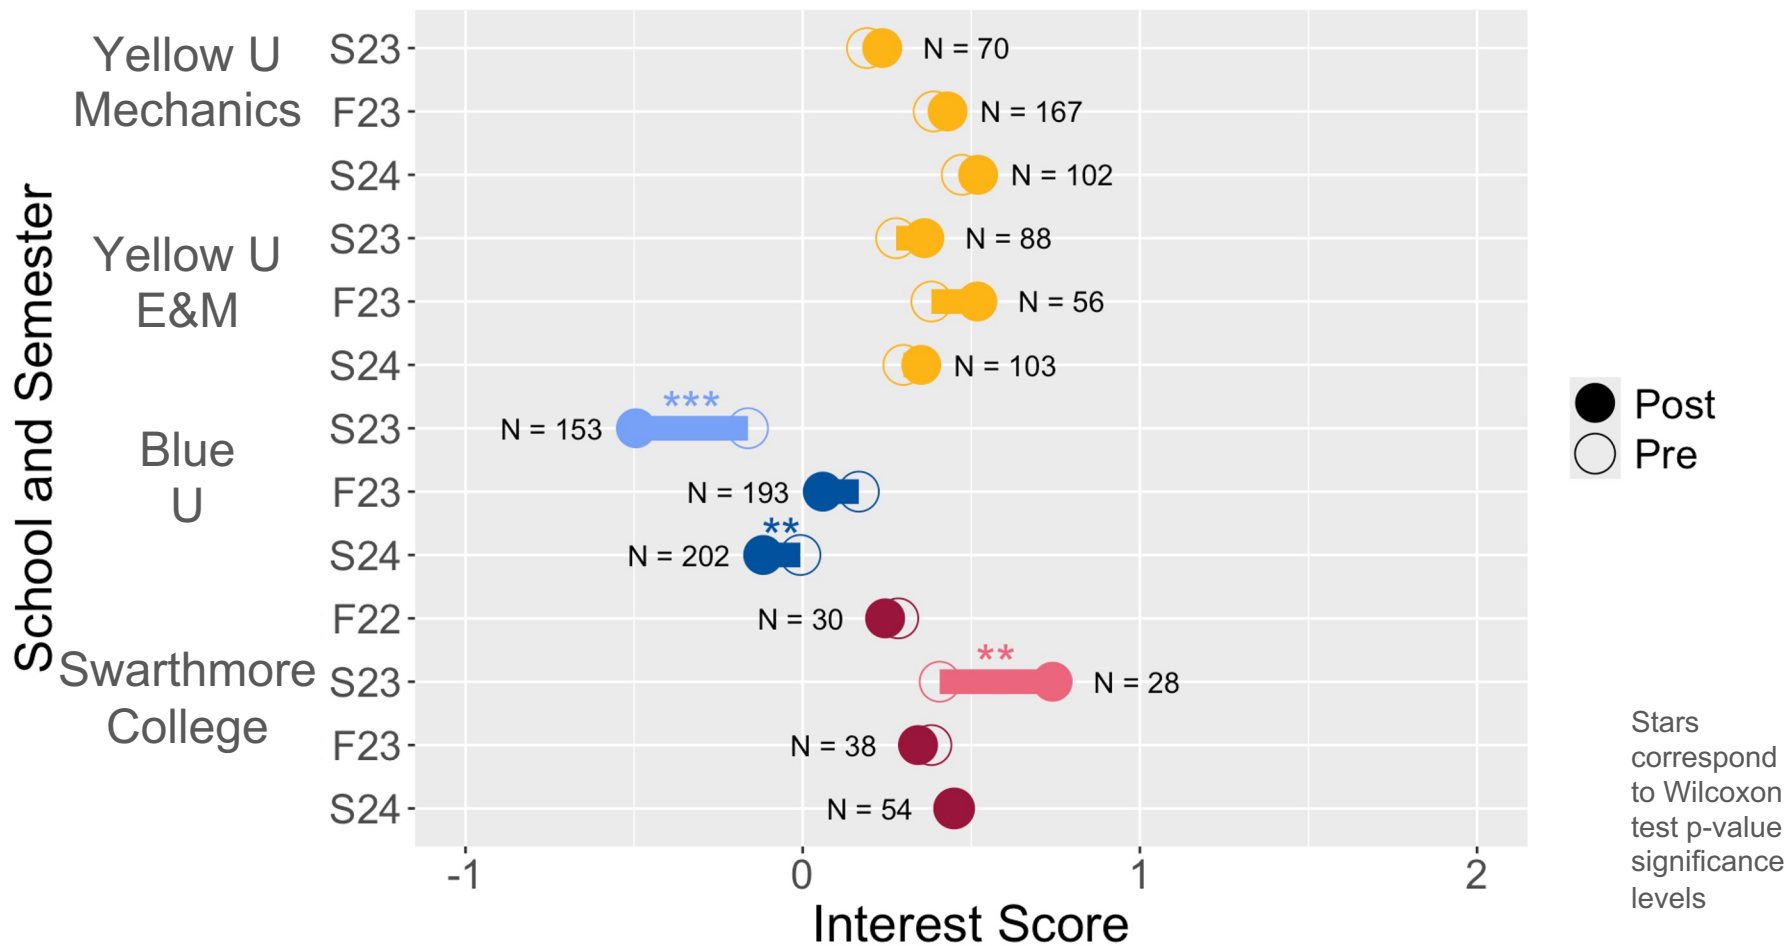

ns

High Pre-PA

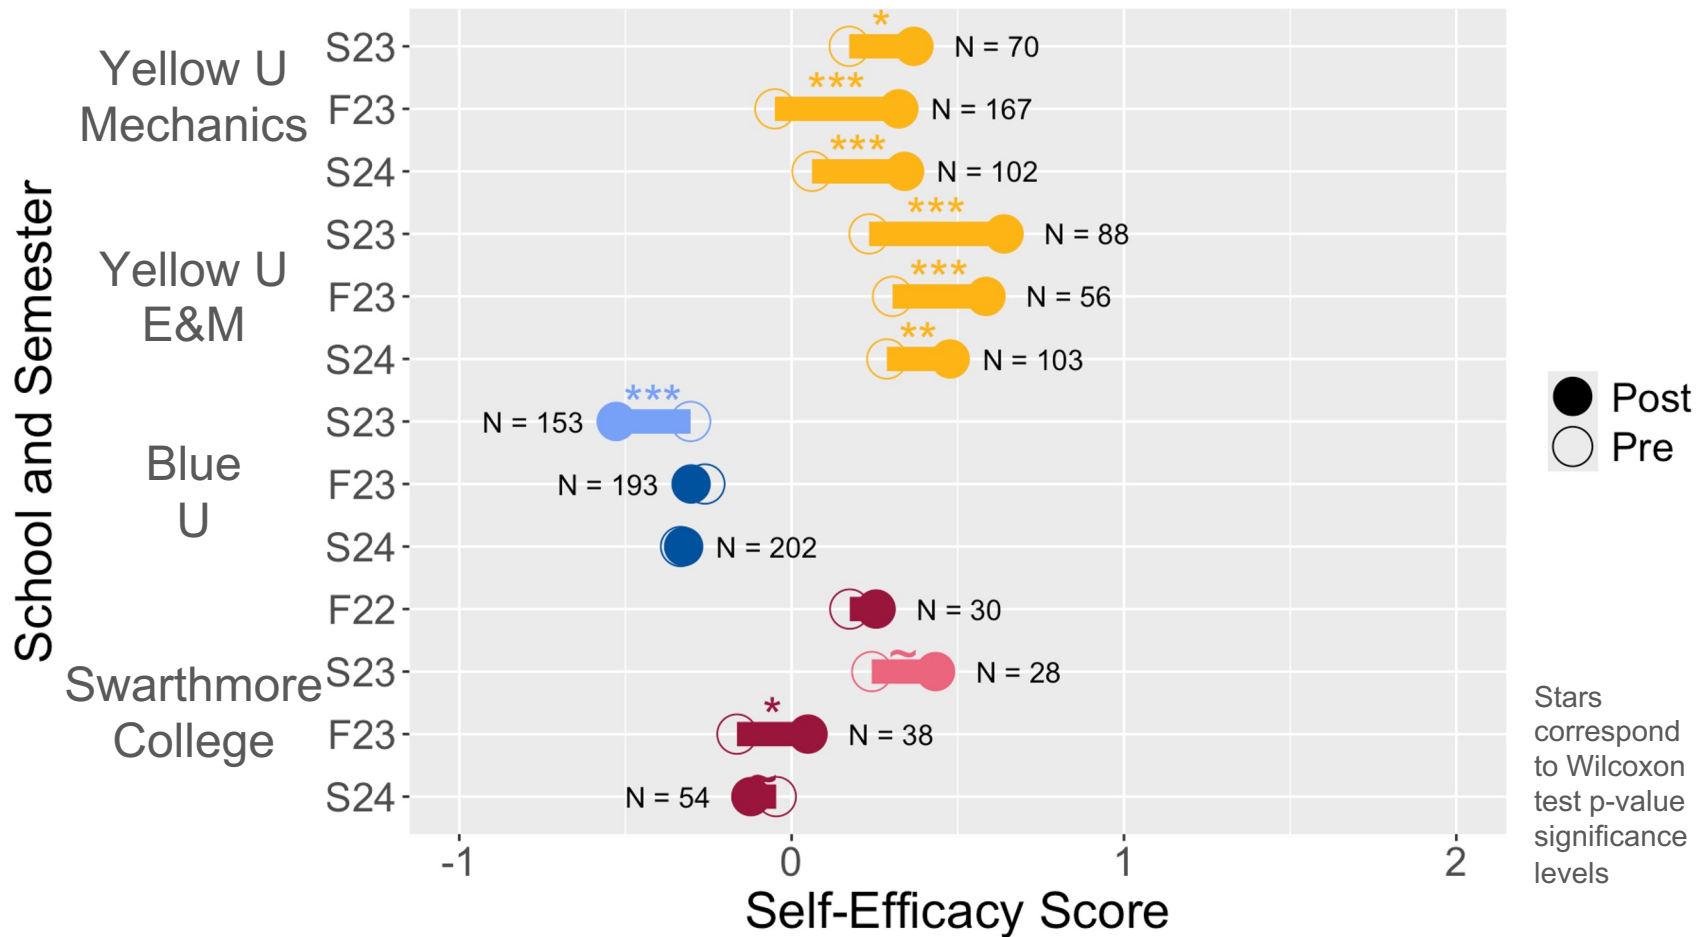

$\mu_{\Delta PA} = 0$

ns

Pre to Post Interest

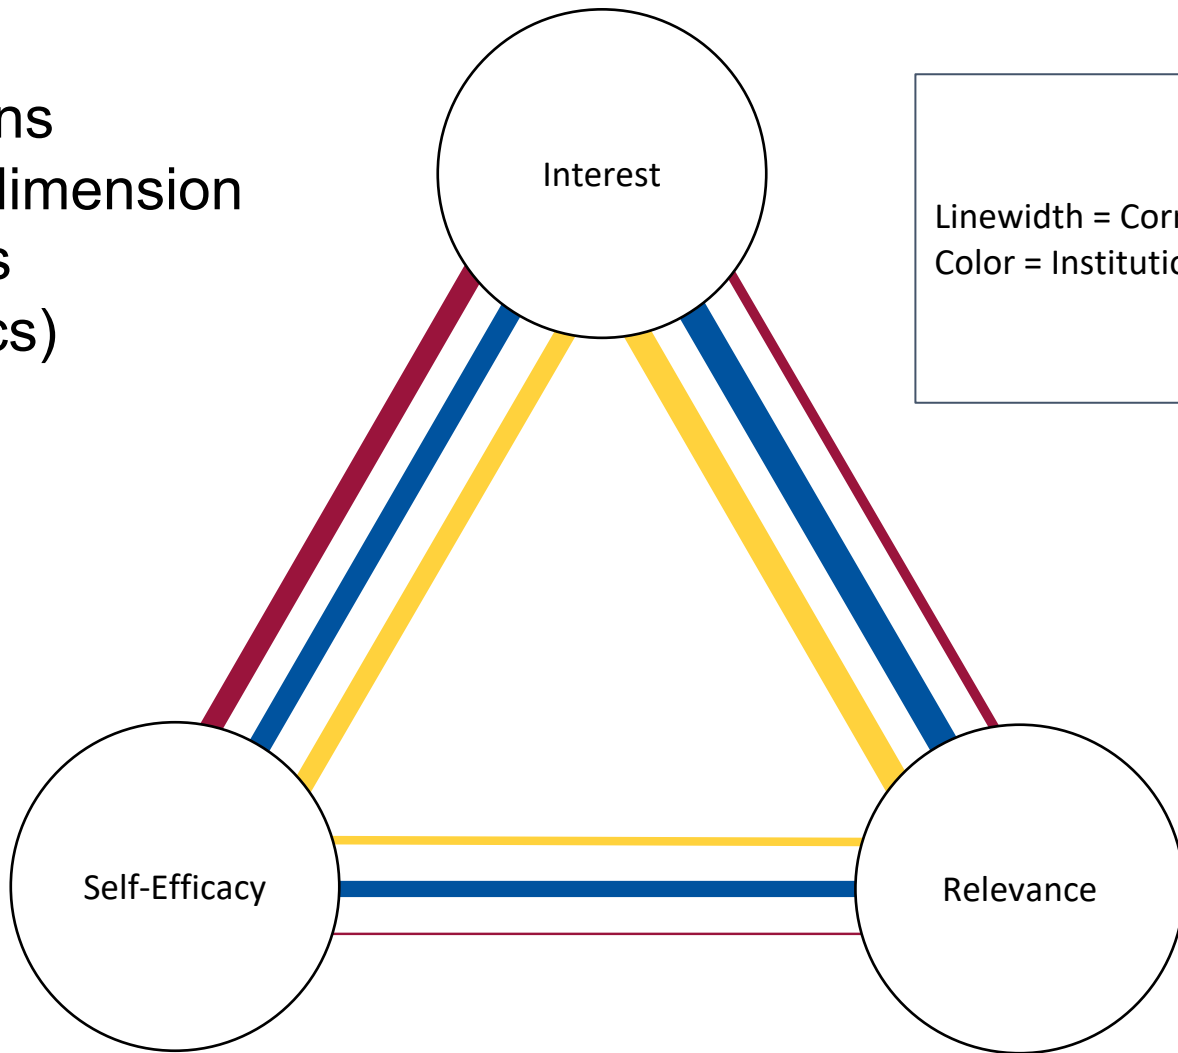

Pre to Post Self-Efficacy

Pre to Post Relevance

Correlations
between dimension
pre scores
(Mechanics)

Linewidth = Correlation Strength
Color = Institution

Summary

- “Yellow U” instructor achieved notable gains in self-efficacy without corresponding gains in interest or relevance, in a course with very few LS connections
- “Blue U” students began with significantly lower affinity, which decreased over the course of the semester, but instruction emphasizing LS connections dramatically mitigated those losses.
- At Swarthmore, the overall PA scores increased significantly with instructor 2, while only low initial affinity students showed significant gains with instructor 1
 - Both instructors used the same curriculum, but instructor 2 emphasized life science connections more dramatically via messaging and course structure
 - The next talk will unpack differences in instructor priorities and detailed course choices

Conclusion

- Characterized LS student gains in three dimensions of physics affinity at multiple institutions
- Established baseline outcome at Blue U before possible intervention
- Established physics affinity outcomes from a variety of instructional environments and curricular choices

Thank you for listening!
